Re: Modern Nuclear Mobile Imaging Services

To Whom It May Concern:

I have been practicing Nuclear Cardiology for the past 18 years and have served/serve on the Board of Directors of the American Society of Nuclear Cardiology, Certification Board for Nuclear Cardiology, Society of Nuclear Medicine and Molecular Imaging Cardiovascular Council and the American College of Cardiology Imaging Council. I have had the distinct pleasure of working with Pat Laverty and his team at Modern Nuclear for the past four years as an independent provider of image interpretation for their Nuclear Cardiology SPECT and PET services. During this time I have found Modern Nuclear to be committed to providing the highest quality nuclear cardiology imaging services. Pat and his team are very responsive to my comments and suggestions and adjust their imaging to image quality.

This commitment to quality is exemplified by the recent upgrade made to their PET camera system. We noticed some patient images were not up to par on the system and there was inconsistency in image quality. After exploring the issue, it became apparent that the equipment needed an upgrade. Without hesitation, Pat explored the options available and selected the best option he could find. The result was a tremendous improvement in image quality while, at the same time, a reduction in patient radiation exposure and the potential to measure real time myocardial blood flow at rest and stress (which is emerging as an important technique for CAD diagnosis and prognosis).

Based on my four years of professional interpretation of the nuclear cardiology exams performed by Modern Nuclear I am able to recommend their services without reservations. I am available to further discuss my perspective should you like to do so.

Respectfully,

Howard C. Lewin, MD FACC FASNC
